

## About Identity Lifecycle Management

An advanced IAM solution that transforms the user onboarding process for companies of all sizes. Our solution not only speeds up the process but also improves organizational security, minimizes user onboarding costs, and reduces provisioning errors. With seamless integration and intuitive configuration, administration can be efficiently managed.

## Features

### ROLE-BASED ACCOUNT PROVISIONING

Admins may create dynamic or static roles. Access to business apps is then provided based on role memberships.

### BIRTHRIGHT PROVISIONING

It enables the necessary accesses to different systems and apps to be automatically granted to new users based on preconfigured rules.

### TIME-BOUND-ACCESS

This feature ensures that a provisioned account or entitlement will be revoked once a specified period is complete and also allows users to request for an extension of access.

### SUSPENSION AND RESTORATION

Automatically suspends or deletes users who are marked as suspended in the integrated SoT – CSV, Enterprise Directory or HRMS.

### DE-PROVISIONING AND TERMINATIONS

When someone leaves an organization, it automatically revokes their accesses across all business apps. This enforces Statutory and Regulatory compliance.

### CONSOLIDATED ACCESS VIEW

Allows admin to get a real-time view of user access across business apps and entitlements. This allows them to take appropriate action if anything unusual is found.

### POWERFUL REPORTING & ANALYTICS

Get insightful & actionable insights on who are your users, apps they're accessing and more

## Identity Lifecycle Management

### Seamless User Onboarding and Offboarding

Automate user access to apps once staff onboard and revoke access as soon as staff offboard seamlessly.

### Orphan Account Management

Automated provisioning deprovisions or disables accounts as soon as users leave thus reducing the risk of unauthorized access to sensitive data and enables admins to quickly manage user access and avoid unnecessary costs.

### Intuitive Configuration and Administration

The right access and controls ensure faculty, staff and students are able to complete their job quickly and securely.

### Seamless Integration

Utilizing the built-in adaptor library will provide seamless integration to critical systems and auxiliary systems.

QuickLaunch is a global IAM provider helping organizations reach their digital transformation goals faster.

We offer comprehensive IAM products like SSO, Smart Password Manager, Adaptive MFA, Passwordless Authentication, Automated Provisioning that make it easy to streamline the user experience while understanding engagement insights - QuickLaunch can be your IAM partner of choice on this journey!
